```
================================================================================
Version 0.91                                                        2017-11-20
================================================================================
* All RDM UIDs and MAC addresses are now listed in the device info screen.
* Improved display of network address information.
* Changed memory management:
   All dynamically allocated memory is now managed by a single heap.

================================================================================
Version 0.90                                                        2017-11-07
================================================================================
* First release.
```
