```
================================================================================
Version 0.96                                                         2019-05-14
================================================================================
```
* Introducing simple user input locking in additon to password locking.
* Fixed regression with non-zero start code sACN data packets.

```
================================================================================
Version 0.95                                                         2019-05-02
================================================================================
```
* Merging can now be turned off.
* The refresh rate can now be changed between max. (ca. 44 Hz) and relaxed
  (ca. 30 Hz).
* Fixed a merging bug that could leave the device in a state where it was
  impossible to send channel values to the outputs below a certain minimal
  level.
* Reworked DMX generation engine.
* Firmware version is now reported correctly via Art-Net.
* Changed RDM buffers to correct size. The buffer size was low before, which
  could lead to crashes of the device.

```
================================================================================
Version 0.93                                                         2018-05-17
================================================================================
```
* Cleaner initialization.

```
================================================================================
Version 0.92                                                         2018-05-16
================================================================================
```
* Improved Art-Net and sACN network traffic filtering.
* Optimized RDM table of device memory organization.
* Changes to memory management.
* Fix: Display content used to appear shifted occasionally.
* DMX outputs are now turned off if low supply voltage is detected.
* Improved displaying of fatal errors.

```
================================================================================
Version 0.91                                                         2017-11-20
================================================================================
```
* All RDM UIDs and MAC addresses are now listed in the device info screen.
* Improved display of network address information.
* Changed memory management:
   All dynamically allocated memory is now managed by a single heap.

```
================================================================================
Version 0.90                                                         2017-11-07
================================================================================
```
* First release.
